Art Unit: 3681

DETAILED ACTION

The following is a first action on the merits of application Serial No.10/633,912, filed August 4, 2003.

Information Disclosure Statement

Receipt is acknowledged of the Information Disclosure Statement filed August 4, 2003. The cited documents have been considered.

Drawings

The substitute sheets of drawings were received on December 29, 2003. These drawings are acceptable.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 20 is rejected under 35 U.S.C. 102(b) as being anticipated by Elliott('198).

Elliott discloses a foot-operated clutch-activating device comprising a foot-operated means 14 for engaging and disengaging a clutch 13. The device includes means for mounting the device (see Figs. 1 and 2) and pedal means 14 responsive to positive foot

Art Unit: 3681

pressure for disengaging the clutch. The foot operated means further includes means 28,32 for locking the device in a clutch disengaging position and means 33 responsive to positive foot pressure for unlocking the device and returning the device to clutch engaging position, whereby the clutch may be selectively engaged and disengaged and may be held in a disengaged position without manual input. This claim does not positively recite a motorcycle in combination with the foot-operated device but rather as an intended environment for the device. Since the Elliott device could be used on a motorcycle, the claim is considered to be met by Elliott.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claim 20 is further rejected under 35 U.S.C. 103(a) as being unpatentable over Elliott('198) in view of Chartier('896). Elliott discloses a foot-operated clutch-activating device comprising a foot-operated means 14 for engaging and disengaging a clutch 13. The device includes means for mounting the device (see Figs. 1 and 2) and pedal means 14 responsive to positive foot pressure for disengaging the clutch. The foot operated means further includes means 28,32 for locking the device in a clutch disengaging position and means 33 responsive to positive foot pressure for unlocking the device and returning the device to clutch engaging position, whereby the clutch may

Art Unit: 3681

be selectively engaged and disengaged and may be held in a disengaged position without manual input. The Elliott device is disclosed as being for use in an automotive vehicle, but it is not specifically disclosed as being used in a motorcycle. Even if the claim is considered to require that the device be used in a motorcycle, the claim is not considered patentable in further view of Chartier. Chartier discloses a foot operated clutch pedal in a motorcycle and discloses means for locking the clutch pedal in a clutch-disengaged position. In view of Chartier it would have been obvious to adapt the Elliott device for use in a motorcycle, the motivation being to permit the motorcycle operator to place both feet on the ground to balance the motorcycle in a stationary position.

Claims 1-3, 5, and 10-13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Shinozaki et al. ('798) in view of Chartier('896). The Shinozaki et al. device discloses a foot-activated device having a foot pedal 20, a link 25, and a shaft 22,23,30 connecting the pedal to the link. An escapement mechanism 50,62 cooperates with the shaft to selectively hold the device in one position. The Shinozaki et al. device is disclosed as being for holding a motorcycle brake pedal in a depressed, brake-engaged position. Chartier discloses providing a motorcycle with a foot activated device and a means to lock the clutch pedal in a depressed position. In view of Chartier it would have been obvious to adapt the Shinozaki et al. device to provide a foot operated clutch pedal that can be locked in its depressed position, the motivation being to permit the motorcycle operator to place both feet on the ground to balance the

Art Unit: 3681

motorcycle in a stationary position. In Shinozaki et al. the escapement is a pawl and ratchet.

Claims 4, 6, 7, 14,15, and 16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Shinozaki et al. ('798) in view of Chartier ('896) as applied to claims 1-3, 5, and 10-13 above, and further in view of Elliott ('198). In the device taught by Shinozaki et al. and Chartier, a separate device is provided to release the escapement to permit the pedal to be moved to the clutch engaged position. Elliott discloses a clutch pedal locking arrangement wherein positive pressure on the clutch pedal will release the escapement. It would have been obvious to modify Shinozaki et al. to permit release of the pawls via the cam 33 in response to pressure on the pedal, the motivation being to permit easier lock release.

Claim 19 is rejected under 35 U.S.C. 103(a) as being unpatentable over Shinozaki et al. ('798) in view of Chartier ('896) as applied to claims 1-3, 5, and 10-13 above, and further in view of Zook ('926). This claim calls for a mounting plate for supporting the foot-operated device, and the Shinozaki et al. does not clearly show what structure is used to mount the device. Zook discloses a mounting plate 2 for mounting a foot-operated lever to a motorcycle to convert hand-lever operation to foot-lever operation. It would have been obvious to provide a mounting plate for the device of Shinozaki et al., the motivation being to provide support for the foot-operated activating device.

Art Unit: 3681

Allowable Subject Matter

Claims 8, 9, 17, and 18 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Herrell('767) shows a foot-operated clutch pedal on a motorcycle. Kirst('796) and Saylor('529) disclose clutch pedal locks released by pressure on the pedal. Osborne('312) shows a clutch pedal on a motorcycle. Dennert et al.(US 2003/0222425 A1) shows an arrangement for mounting a clutch pedal 128 on a motorcycle. Particular attention is also directed to the Rush('195) patent (cited by applicant), which specifically discloses modifying a newer model motorcycle from a hand-operated clutch to a foot-operated clutch to mimic older versions.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Rodney H. Bonck whose telephone number is (703)-308-2904. The examiner can normally be reached on Monday-Friday 7:00AM - 3:30PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Charles A. Marmor can be reached on (703)-308-0830. The fax phone
